

Lab 13

For this Assignment 13, do the following:

Take the/your solution from Assignment 12, and re-implement/replace the `ContactFormServlet` and the `ThankYouServlet` using Java Server Pages. i.e. create and add 2 new JSP files (e.g. `contact-form.jsp` and `thankyou.jsp`), and have the `ProcessContactFormDataServlet` forward/redirect to either of these 2 JSPs, depending on the data validation result.

Therefore, in this revised implementation of the "Customer Contact Us" web application solution, you will be applying the Model 2 architecture, a.k.a MVC. In your solution, make sure to have/show the 'separation of concerns' - i.e. model(s), view(s), controller(s).

Submit your finished work to Sakai (and/or github repo).
